Time Spent:	0 minutes		
Original estimate:	0 minutes		

Rank:	0 i0004h:
Sprint:	SPRINT 1

Description

Review the selected codebase to identify necessary bug fixes, refactoring, or new features. Translate these requirements into clear Agile user stories.

Business Value & Scope
Define functional and non-functional specifications for the Local RAG Chatbot to ensure air-gapped, secure, and contextually accurate retrieval of Standard Operating Procedures (SOPs).

User Stories & MoSCoW Prioritization

- US-01 (Authentication - Must Have):** As a secure system user, I want to authenticate via local credentials so that unauthorized users cannot access confidential corporate SOP data.
- US-02 (Document Ingestion - Must Have):** As an administrator, I want the system to scan local directories and chunk PDF documents automatically so that knowledge is indexed efficiently.
- US-03 (Semantic Search & Citations - Must Have):** As a staff member, I want natural language queries to return precise answers accompanied by exact source document names and section references to prevent hallucinations.
- US-04 (Polyglot Integration - Should Have):** As a developer, I want Java Spring Boot to orchestrate file triggers and pass payloads securely to a Python FastAPI AI microservice.
- US-05 (Containerization - Could Have):** As a DevOps engineer, I want the application containerized via Podman to ensure environment parity between local development and the home server.

Implementation Checklist

- [x] Review project guidance documents and stakeholder assessment criteria
- [x] Formulate Agile user stories mapped to module learning outcomes (K1, P2, P3, P5)
- [x] Establish MoSCoW prioritization framework for backlog management
- [x] Define data governance and strict local-only execution boundaries

Comments

Comment by Amal S [10/Aug/26]

Status Update: Completed. Developed comprehensive user stories covering local authentication, automated ingestion, semantic retrieval with exact section citations, and polyglot architecture, prioritized using the MoSCoW methodology.
